Have safe sex

About this easy read booklet

This booklet is about sex.

You can learn about how to have safer sex.

If you are worried about your health, you should talk to a doctor or nurse.

Have safe sex

You can make changes to your life that may make you less likely to get cancer.

You can do things to keep yourself healthy. Having safer sex is one of these things.

If you have sex without a condom, you may get an **infection** that can lead to cancer.

An **infection** is when germs attack your body. Infections might make you feel unwell.

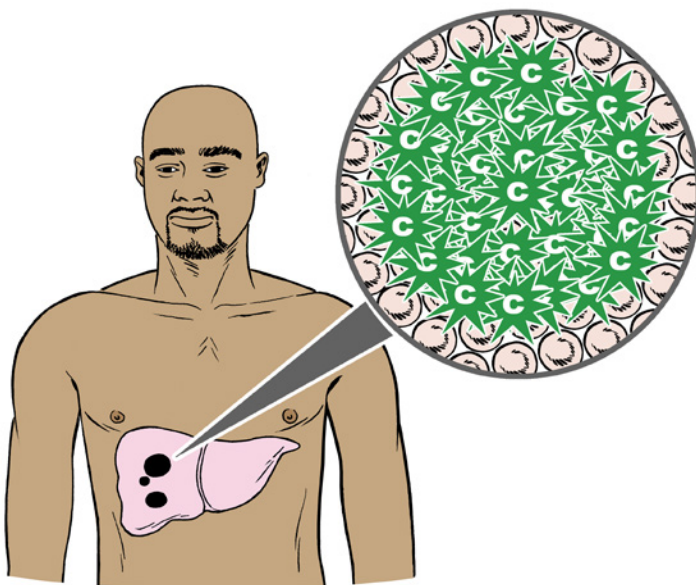

One of these infections is called **HPV**.

HPV is an infection that can be passed between people. Most of the time, the infection is harmless. But sometimes it can lead to cancer. This may take years.

All girls between the ages of 12 and 18 are offered a jab to protect them against 2 types of HPV.

Another of these infections that can lead to cancer is called **Hepatitis B**. This can cause liver cancer.

Hepatitis B is a virus that infects your blood. It can damage your liver.

You might not know if the person you are having sex with has one of these infections.

It is best always to use a condom, whether you are having sex with a man or a woman.

Talk to your doctor if you need any more information about safe sex.

How Macmillan can help you

You can get support from:
